Enhancement for Sage MAS 90 and MAS 200

Auto Generate Work Orders from Purchase Orders

Overview

The **Auto Generate Work Orders (AGWO)** enhancement streamlines and automates the process of creating work orders associated with purchase orders that have already been entered. This is especially valuable for organizations that inventory all components for finish goods but outsource the labor for the production or manufacturing of the actual finished goods themselves. The AGWO enhancement allows users to automatically generate a work order for the finished good after a purchase order for the related outsourced labor is entered. In addition, when the purchase order is closed, the enhancement can automatically close the work order and generate the entry that adds the finished good into inventory and issues the component items out of inventory. This enhancement eliminates significant manually processes as well as reduces numerous opportunities for data entry errors or omissions, increasing the accuracy of inventory and production statuses.

Key Features & Functions

- Automatically creates work orders based on purchase orders
- Automatically closes work orders based on receipt of goods
- Improves accuracy of work order processing
- Increases speed of entries
- Improves timeliness of inventory information
- Improves visibility of inventory work in process

4. Proceed to create a Purchase Order, while entering one (1) or more items that meet all of the following criteria:
 - Item has Alias Items.
 - One of the Alias Items is BM.
 - The BM alias item is type General.
 - The description of the Alias BM General item is a bill number. This will be the finished good entered on the work order to be created.
5. Press the **Accept** button.

Auto Generate Work Orders from Purchase Orders

Technical Information

1. Criteria for selecting the finished good on the related Work Order:
 - a. For each valid item on the Purchase Order Lines, the program will check that item's related ALIAS file.
 - b. If an Alias Item Number for *BM* exists for the item received, then the function will automatically create a Production Entry for the item number contained in the BM Alias Item's related Description field.

The screenshot shows a window titled "Alias Item Number Maintenance". It contains the following fields and controls:

- Item No.: FNF-303
- Description: FUN FASHION POLISH FILL- OCEAN
- Alias Item Number: BM
- Type: General (dropdown menu)
- Description: FN-303

At the bottom, there are navigation buttons (back, forward, search, refresh) and action buttons: Accept, Cancel, Delete, Print, and Help.

In the above example, item number FNF-303 (the "fill" item for the finished good FN-303) has been received and updated from Receipt of Goods Entry. The function would then automatically create a Production Entry for item FN-303.

- c. If an Alias Item Number for *BM* does not exist, the function will bypass this item.
2. Closing the Work Order

When a receipt of goods entry is updated for the related purchase order, the user will be prompted to "Close Work Order". If "YES" is selected, the related work order will also be closed at that time. Closing the work order will result in the finished good being added to inventory and the component items being removed from inventory.
