Enhancement for Sage MAS 90 and MAS 200

Open Sales Orders by Item Report with Inventory Planning

Overview

The **Open Sales Order by Item Report with Inventory Planning** adds a running inventory quantity on hand balance to the report to give inventory planners the ability to know when items will fall out of stock. With this information, they can then generate purchase orders to make sure items are available for sale by the appropriate date.

Key Features & Functions

- Merges inventory quantity on hand with open sales orders and open purchase orders to give a timely view of inventory status
- Allows entry of an “as of” date to cut off orders after that date
- Prints negative stock quantities in red to allow ease of use
- Run the report for any date at any time, and the report will tell you the projected inventory quantity on hand
